Art Unit: 2832

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 3-4, 6-8, 10-11 and 13 are rejected under 35 U.S.C. 102(e) as being anticipated by Fiorini et al. Fiorini discloses the claimed invention at Figs. 5a-5b with polycrystalline SiGe resistor 46, contacts 47, silicon substrate 41, dielectric layer 42, and dielectric substance 45 (the two meeting embedded of claim 6). Boron is doped, and annealing performed, at col. 8, lines 57-67, for claims 4, 10, and 13. For claim 11, germanium is as noted.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 2832

4. Claim 9 is rejected under 35 U.S.C. 103(a) as obvious over Fiorini et al. Fiorini discloses the invention as noted above, except deposition in amorphous form. Fiorini discloses that it is known to employ amorphous SiGe as a bolometer at col. 2, lines 18-25, for the purpose of decreasing the 1/f noise, and it would have been obvious to employ the amorphous form where polycrystalline forms of SiGe are noted in the same passage, and Fiorini discloses at col. 4 using the latter form to control noise in a bolometer
